

## COMPANY COMMITMENT to WASTE REDUCTION & THE ENVIRONMENT

Halverson Civil Ltd acknowledges that what we do today has an impact on the future environment. As such, we have challenged ourselves to lower our environmental impact by:

### 1. Minimising construction waste

- a. Where possible we actively seek to reduce the volumes of construction materials consumed on site and optimize the procurement, and disposal of, construction materials in order to mitigate waste.
- b. We consider waste reduction opportunities prior to starting any works to enable the design or materials to be improved.

### 2. Minimising the impact we have on the environment

- a. We consider risks to the environment prior to starting any project and ensure these risks are communicated and managed with all stakeholders from design to implementation and after the completion of any project
- b. Where possible we consider options to prevent risks to the environment. Where risk is unavoidable, we put forward controls to minimise the damage and have plans in place to clean up. We communicate these plans with HCL staff, sub-contractors, clients and relevant government authorities.
- c. We train and monitor staff and sub-contractors prior to starting works
- d. We ensure compliance with government standards, bylaws and best practice guidelines, wherever possible.

### 3. Ensuring that our carbon impact is reduced where possible

- a. Where practical all HCL vehicles shall at a minimum comply with required emission standards. Where possible, lower emission vehicles and plant shall be selected.
- b. HCL staff shall aim to reduce unnecessary plant movements and where possible substitute lower emission vehicles and lower carbon footprint materials.

### 4. Monitoring and promoting best practice

HCL Directors shall regularly monitor what we are doing and how we can improve and, ensure staff and sub-contractors have the required resources to minimise negative impact to the environment.
